

DROP-SHAPED FIBER

@saltex

BECAUSE WE CARE

Saltex, part of the Unisport Group and a FIFA preferred producer, is an artificial grass producer with its own modern production facilities located in the Northern Europe. Saltex is known for its drive for innovation and high quality products, with a focus on developing artificial grass systems that meet and exceed the expectations of players and owners of sport facilities throughout the world.

Drop-shaped fiber

SALTEX DROP

WHY CHOOSE DROP FIBER FOR YOUR FIELD?

1. **Good technical characteristics** and **easy maintenance**
2. The shape allows **high micron value/durability** and **good elasticity/pleasant touch**
3. **Controlled abrasion** from the thinner end **prevents splitting** and leaves the wider technical part as a **long lasting playing surface**
4. **Natural appearance** – Visible shape and optimal width highlight the looks of the fiber and the appearance part enables **light to penetrate the grass**
5. Saltex Drop is also available in **MTRX**

BENEFITS OF THE DROP SHAPED FIBER

1. Fiber **remains in an upright position**
2. **Excellent recovery** makes field maintenance easier
3. Does **not** have a **critical breaking point**
4. **Optimal** ratio between the **thickness and width**
= Dtex 2000 / fiber

SALTEX PU POWERBACKING

The standard artificial grass products are usually backed with SBR latex. However, Saltex wanted to incorporate more functionality, quality and sustainability in the backing and therefore selected PU as a material. By using Saltex PU PowerBacking the following advantages are reached:

1. Better tuft lock
2. Better handling of wet weather conditions
3. Better interaction with seam glue, easy installation
4. Better for the environment, 100% recyclable

MTRX

Saltex Drop is also available in MTRX. Whereas the traditional artificial grass products have a carpet-like structure; the matrix structure makes the Drop fibers spread in a natural pattern. With natural grass as our inspiration we have created the most natural looking, feeling and playing artificial grass field available.

BLUE VISION

Saltex Blue Vision goes beyond eco-efficiency. The Blue Vision approach means not only minimising negative ecological footprints and pollution but also making the largest possible positive footprint.

This is achieved by developing as environmentally-friendly products and processes as possible and seeing waste as a reusable material. In an eco-effective mind, economic growth and ecological added value go hand in hand.
